

SINTER & SINTERSTORE:

SINTER is set command which is used to return the elements of the set resulting from the intersection between the first set and all the successive sets. If the keys do not exist in Redis, then it is considered as empty sets.

SINTERSTORE is set command which is used to store the elements of the set resulting from the intersection between the first set and all the successive sets to a specific destination.

SYNTAX:

SINTER KEY_1 KEY_2

SINTERSTORE DEST_KEY KEY_1 KEY_2

EXAMPLE:

```
D:\Redis\redis-cli.exe
127.0.0.1:6379> SADD Name Ajay Maayon Aj Aju
(integer) 4
127.0.0.1:6379> SADD Name1 Maayon Vijay Ajith Ajay Arun
(integer) 5
(0.76s)
127.0.0.1:6379> SINTER Name Name1
1) "Maayon"
2) "Ajay"
127.0.0.1:6379> SINTERSTORE InterName Name Name1
(integer) 2
127.0.0.1:6379> SMEMBERS InterName
1) "Maayon"
2) "Ajay"
127.0.0.1:6379>
```
