

## **MGET:**

MSET is string command which is used to get multiple values for the multiple keys at a time. If key has a value then it return value of it, else it returns a “nil” value for it.

## **SYNTAX:**

MGET KEY\_1 KEY\_2 .... KEY\_N

## **EXAMPLE:**

```
D:\Redis\redis-cli.exe
127.0.0.1:6379> SET Name "Maayon"
OK
127.0.0.1:6379> SET Age 19
OK
127.0.0.1:6379> MGET Name Age Gender
1) "Maayon"
2) "19"
3) (nil)
127.0.0.1:6379>
```

Here

KEY\_1 = Name

VALUE\_1 = Maayon

KEY\_2 = Age

VALUE\_2 = 19
